

FLOOR PLAN — REV B

ARROWS + ETHERNET

REV B · 22 SEP 2026 · TO SCALE
ANCHORED ON THE 12×24 GARAGE

Corrects Rev A on two counts: the east block is **all office** (those labels read **ethernet**, not “entrance”), and **the arrows mean a room extends that direction** — so the hall and living room now run east and the office runs south.

TWO THINGS FIXED IN REV B

- **Your handwriting said ETHERNET, not “Entrance.”** Rev A invented an ENTRANCE room that does not exist. The whole east block is **OFFICE**.
- **The arrows mean “this room extends this way.”** I had read them as pointers. Now applied: **hall extends east, living room extends east, office extends south.**

ETHERNET DROPS — BOTH MARKED

- **OFFICE** — this is the RE200’s Cat6 backhaul. It was an open question in Rev A.
- **GUEST BEDROOM** — second drop.

Why the office drop matters. The RE200 is a *wired* access point, and that drop is what makes it a real AP rather than a repeater. It is also why dedicating it to the B-hyve works: the timer sits on the far side of that same office wall, one brick away, while it is currently talking to the gateway at the opposite end of the house.

TOTALS

- House **44 × 32 = 1,408 sf** — 8 sf off the recorded 1,400
- Garage **12 × 24 = 288 sf** — your measurement, the ruler for everything else

- Living room is now **15×11 = 165 sf** — the arrows fixed the cramped 110 sf I flagged in Rev A

Still open:

- ● **Where is the 3rd bedroom?** The record says 3 bed / 2 bath and I can still only place master + guest.
- Is the **FRONT PORCH** outside the wall as drawn, or is that box a bedroom with the porch beyond it? That would be the missing third.
- **OFFICE at 11×19 = 209 sf** — still a large office. Correct if it is smaller.
- Does the **hall** really run 18 ft, or did I overshoot the arrow?

Next: shell first, then the 38-number device key.
