

CORE STACK IN THE CORNER

Rev E markup applied: **that room was the LIVING ROOM, not hall/bath**, and the **hallway is its own corridor**. Photos folded in. **Hot tub removed — there is none**. Garage PC placed on the workbench.

REV J · 22 SEP 2026 · TO SCALE
ANCHORED ON THE 12x24 GARAGE

YOUR REV E MARKUP, APPLIED

- **HALL / BATH was wrong — that room is the LIVING ROOM.** Struck and relabelled. The living room is the big central space, not just a south strip.
- **HALLWAY is its own narrow corridor** running east along the north edge of the living room, out of the foyer. It was never a room.
- **LAUNDRY ROOM** relabelled, washer and dryer placed
- **Garage:** main door north, man door west, electric panel, steps
- **Back deck:** steps at the west end
- **Kitchen order corrected:** stove, fridge, sink, then the bar
- **Master bed:** window, bed, TV, Beast, gateway

● **NO HOT TUB — my error, removed.** I called a covered object on the deck a hot tub from a night photo. It was a guess stated as a fact, which is the same mistake as calling a garage door closed from a picture. It is gone from the drawing.

Also in, from the photos: the 20x25 **RETURN AIR GRILLE** is in the **LIVING ROOM** — the grille your duct scope keeps and every bid is priced around. Fireplace with TV above, thermostat, tray ceiling. Deck is **elevated on posts**

with an **outdoor TV**. Garage workshop populated.

Garage PC on the workbench — and it settles the Bluetooth question.

The Lenovo lives on the bench, so the **Cudy BU530 dongle** is at bench height under the wall TV. Any Bluetooth speakers have to be in range *of the bench*, not of the garage door end. The adapter is already up and pairable at D4:0D:AB:15:2A:75.

● **THE ENTIRE NETWORK CORE IS IN THE MASTER BEDROOM.** The **J45 Beehive sits on top of the Beast**, and the pair sit **back in the corner to the LEFT of the dresser and TV**. The **gateway** is the white unit **on the dresser** itself. So in one corner of the house you have: **the internet gateway, the Beast, and Home Assistant with the Zigbee coordinator and its antenna.**

Two things follow, and both are measurable:

- **Zigbee radiates from the master bedroom**, not from the middle of the house. Every LQI reading in the record is distance-from-here. The mailbox, the garage sensors and the leak sensors are all reaching back to *this* corner.

- **The B-hyve is as far from the gateway as the house allows** — and it chose the gateway anyway over the RE200 sitting one brick wall away. That is the 256 ms / 5% loss measured at 06:16.

TOTALS

- House **1,408 sf** against the recorded 1,400 · Garage **288 sf**
- Living room **270 + 88 = 358 sf** across both parts

Check these:

- Is the living room really **both** the centre block and the east end, or does something else sit in that southeast corner?
- **Hallway 18×4** — right length and width?
- The **down-arrows from guest bed and guest bath** — do those rooms run further south than I have them?
- A/C east and the Beast in the master bedroom are **your word over my inference**.
