

FLOOR PLAN — REV E

LIVING ROOM RUNS EAST

REV E · 22 SEP 2026 · TO SCALE
ANCHORED ON THE 12×24 GARAGE

The living room now runs east to the outside wall with the office sitting directly above it. **Check that reading first** — the panel on the right explains the alternative.

CHANGED IN REV E

- **The LIVING ROOM now runs east all the way to the outside wall**, and the **OFFICE / BED 3 sits directly on top of it** — they share a wall instead of sitting side by side. That is how I read “the south end of the office ends with the living room.”
- Office is now **11×11 = 121 sf** instead of the 11×19 = 209 sf of Rev D — a sensible bedroom rather than a long corridor.
- Living room is now **26×8 = 208 sf**, the biggest room in the house, which fits a room with 8 LEDs and a ceiling fan in it.

✓ 3 BED / 2 BATH still reconciles.

MASTER · GUEST · OFFICE/BED 3, with MASTER BATH and GUEST BATH. Matches the 1,400 sf figure the record has carried since 08-31.

Check this one first — I may have read it backwards. I took “the south end of the office ends with the living room” to mean the living room is **south of** the office. The other reading is that they sit **side by side** and simply end at the same south wall, which is what Rev D already had. **If Rev D was right and this is wrong, say so and I will put it back.**

Still to check:

- **HALL / BATH is $18 \times 11 = 198$ sf** — large, even including a bathroom. Where does the hall actually stop?
- Is the house really **44 wide $\times$ 32 deep**?
- **KITCHEN at $18 \times 8 = 144$ sf** — it shrank when the middle band got deeper. Right?

Next: shell first, then the 38-number device key.
