

FLOOR PLAN — REV D

3 BED / 2 BATH RECONCILED

REV D · 22 SEP 2026 · TO SCALE
ANCHORED ON THE 12×24 GARAGE

The office **is** the 3rd bedroom. That reconciles the plan against the recorded **3 bed / 2 bath** and closes the last structural question.

ADDED IN REV C

- **THE BEAST IS IN THE MASTER BEDROOM** — the same room as the gateway. That was not written down anywhere.
- **Front porch:** outlet and bell, and it is **COVERED**
- **Laundry:** washer and dryer, across from each other
- **Kitchen:** stove, refrigerator, sink, bar
- **Living room:** ceiling fan, and the **back deck door**
- **Back deck is OPEN**, not covered — corrected
- **Outside the east wall:** A/C unit, and the B-hyve control box + irrigation

Why the Beast's location matters more than it looks. It sits in the master bedroom with the gateway — the far end of the house from the office. So the machine doing the heavy lifting and the router the B-hyve wrongly attached itself to are in the same room, and both are about as far from the irrigation timer as anything in this house can be.

TOTALS

- House **44 × 32 = 1,408 sf** against the recorded 1,400
- Garage **12 × 24 = 288 sf** — your measurement, the ruler for everything else

✓ **3 BED / 2 BATH NOW**

RECONCILES. Bedrooms: **MASTER, GUEST, OFFICE / BED 3.** Baths: **MASTER BATH, GUEST BATH.** That matches the figure the record has carried since 08-31 — the one used to size the A/C at 2.5 ton. The shell is now internally consistent.

Last things to check:

- **OFFICE / BED 3 is $11 \times 19 = 209$ sf.**
That is long and narrow for a bedroom. Is it shorter, with something else south of it?
- Does the **hall** really run 18 ft east, or did I overshoot your arrow?
- Is the house really **44 wide $\times$ 32 deep**, or is it squarer / longer?
- Fixtures are in the right rooms but roughly placed — move any where the wall matters.

Next: shell first, then the 38-number device key.
