

# FLOOR PLAN — REV N

## THE OFFICE IS EAST

REV N · 22 SEP 2026 8:45 AM · YOUR MARKUP READ OFF

ANCHORED ON THE 12x24 GARAGE

**The OFFICE is the whole east column,  $11 \times 19 = 209$  sf** — your circle, and the line you drew out to the B-hyve. Living room is the centre block only. Hallway turned back to east–west. **Pantry, fireplace on the east wall, bath fixtures, ni added.**

**👍 YOUR CIRCLE SETTLED IT — AND  
IT SETTLED IT THE OTHER WAY**

**You drew OFFICE across BOTH the 11x11 and the 11x8 below it**, with a line running out to the B-hyve. So the office is **the entire east column, 11 x 19 = 209 sf**, on the **EAST** wall — the brick the B-hyve is mounted through.

**That clears the contradiction I could not resolve.** When you said “the living room southwest corner is really the office”, the corner your pen actually circled is the **southEAST** piece. The office never moved west. Your pen says east, the B-hyve says east, and the chimney in the roof shot says the fireplace is east. **All three agree now.**

So the **living room is the centre block only,  $18 \times 15 = 270$  sf**, and the doors work: from the hallway, **guest bed on the north side, office straight off the east end**. The hallway stays  **$18 \times 4$  east-west** — I turned it  $90^\circ$  in Rev M and **that was wrong. It is turned back**.

## EVERYTHING ELSE OFF YOUR PEN

- **🔍 PANTRY** — a room that has never been on this plan. Drawn  $10 \times 3$  off the south end of the master bath, where your arrow pointed toward the kitchen. **The**

**size and the exact spot are my guess.**

Correct it.

- 🔥 **FIREPLACE moved to the LIVING ROOM'S EAST WALL**, where your arrow put it — and it lines up with the chimney on the east half of the roof.
- 🚽 **Master bath: toilet · tub · sink.**  
**Guest bath: tub + sink.** Neither room had a single fixture on it before today.
- 🛏 **DRESSER and TV on the master bedroom's east wall**, bed to the west, door at the southeast.
- 🍷 **Dining TABLE** at the east end of the kitchen, by the bar.
- 🪟 **Nine windows placed** — three north, four south (two kitchen, two living room), two east in the office.
- 🚪 **Four door swings** — master bed, office, guest bath, guest bed.
- 🚗 **DRIVEWAY down the west side and a SIDEWALK up to the porch.** First time either has been on the drawing at all.
- 🚶 **Deck:** steps at the **west** end, outdoor TV at the **east** end where you moved it, and the deck carried further east.

⚠ **One number I need you to settle, because it changes the square footage.**

A **recessed** porch is **carved out of** the heated floor area, not added to it.

Drawn at **8 × 6 that removes 48 sf**, so the house reads **1,360 sf** instead of 1,408.

Your sheet had the porch at **12 × 8 = 96 sf**. Recessed at that size the house drops to **1,312** and the foyer behind it gets very shallow. **So either the porch is smaller than 12 × 8, or the house**

**is deeper than 32 ft.** I drew the smaller one. Which is right?

**Still anchored on the garage** —  $12 \times 24$ , your tape measure, at the south end of the west side as you told me, with the  $12 \times 8$  now on the north. **11 pixels to the foot throughout.**
