

FLOOR PLAN — REV 0

THE PORCH IS AN ELL

REV 0 · 22 SEP 2026 8:57 AM · OFF YOUR THREE PHOTOS
ANCHORED ON THE 12×24 GARAGE

A projecting front gable with an arched window — so the porch is tucked BESIDE it, not carved out of the house.

No floor area is lost, and your 12×8 was right. Plus a bay window on the rear that was never on the plan, the flag moved to its real pier, and the rear windows re-placed off the elevation.

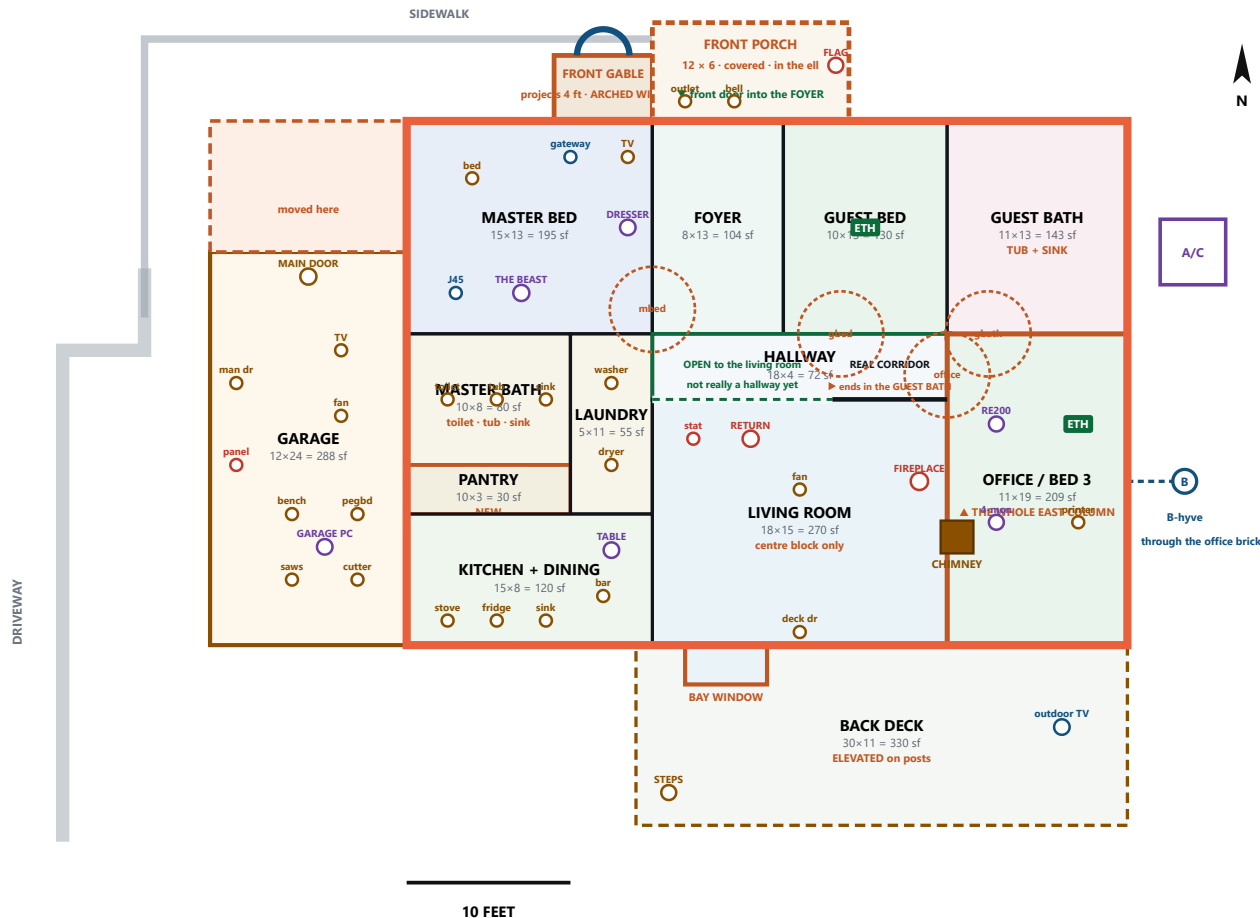

YOUR THREE SHOTS CHANGED THE ANSWER ON THE PORCH

The driveway shot shows a **PROJECTING FRONT GABLE** with a tall arched window, and the porch sits beside it. That is the piece I was missing, and it dissolves the square-footage problem I asked you about.

The porch is not carved out of the house — it is tucked into the ell **BESIDE** a wing that sticks out. The brick on both sides in the doorbell shot is the gable's side wall on one hand and the porch's own return on the other. So **no heated floor area is lost**, and the house stays at **1,408 sf**.

✓ And it means your 12 × 8 was right and my 8 × 6 was wrong. The two railing sections either side of the step read as about **12 ft across the opening**. Drawn **12 wide × 6 deep**. If it is 8 ft deep rather than 6, say so — nothing else on the plan moves, because it sits outside the heated box now.

✓ 9:01 AM — “it’s not really a hallway until the living room ends, and the hallway ends in the guest bathroom.” Drawn that way now: the west stretch has no south wall at all — it is simply the open north edge of

the living room — and it becomes a **real walled corridor** only where the living room stops, running east and **terminating at the guest bathroom door**. That door has moved from the guest bath's west wall to its **south wall, at the end of the corridor**. I **guessed the changeover at 11 ft along** — mark where it really is.

WHAT ELSE THE PHOTOS GAVE ME

- 🕸️ **A BAY WINDOW projecting off the rear**, just west of the deck door, with its own little hipped roof. **It was not on the plan at all**. Drawn 5 ft wide, projecting 2.5 ft.
- 🏠 **The FLAG is on the porch's EAST brick pier**, hanging out over the lawn — I had it sitting on the porch ceiling line. Moved.
- 🏠 **Rear windows re-placed off the actual elevation**: one small one in the blank brick at the garage end, then the bay, then the deck door, then **three window groups running east — and those east ones are the OFFICE's**. An office that is also Bed 3, with its own windows and deck frontage, is exactly what the photo shows.
- 🛠️ **Deck trimmed** to finish at the east wall instead of running past it, and the outdoor TV pulled in to where it actually sits.

✅ **Four things the backyard shot confirms were already drawn right** — steps at the **west** end of the deck, **chimney east of centre, plain brick with one small window across the whole garage end**, and the **driveway**

up the west side. Nothing to change on any of them.

⚠ **Two things I am still guessing at, both flagged on the drawing:**

- **The PANTRY** — 10×3 off the south end of the master bath, where your arrow pointed. Position and size are mine, not yours.
- **Where the front gable actually sits.** I put it just west of the porch, over the master bedroom, because that is the order the driveway shot reads in. **If the gable is east of the porch instead, flip the two.**

Unchanged and still anchored:

garage 12×24 , your tape measure.
House $44 \times 32 = 1,408$ sf. Office $11 \times 19 = 209$ sf, the whole east column, per your circle. **11 pixels to the foot.**
